GPA: 3.01/4.0

🧩 PROJECT

Inventory Management System
For department store
Developed an Inventory Management System for a department store to track stock levels, automate restocking, and reduce losses. Implemented demand prediction model. Enhanced inventory accuracy and streamlined supply chain management.

NPM Package
For Gridfs CRUD operation
Released an NPM package for seamless CRUD operations in MongoDB GridFS, enabling efficient file storage and retrieval.

Hotel Booking System
Developed a Hotel Booking System with real-time room availability, secure payments, and automated booking management. Improved user experience and operational efficiency.
